

Making critical systems
more secure and reliable for a safer world

Participating in innovation
having a positive impact on the environment

Acting in kindness

Developing and transmitting

Ensuring business ethics

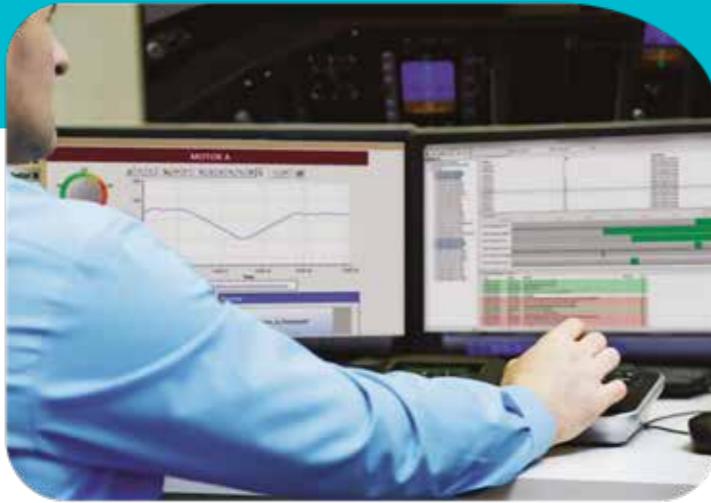

Involving our stakeholders
partners & shareholders

U-TEST®

Simulation Platform

U-TEST® Simulation Platform

U-TEST® the software solution that helps you optimise your model development.

Full continuity of validation process, from design to final acceptance.

Continuous re-use of Test Procedures

Real Time engine

MATLAB Simulink Integration

FMI 2.0 / 3.0

Full Continuity of validation on process, from design to final acceptance

Continuous reuse of the test procedures

Performance and modularity

U-TEST, the test «toolbox» for complex simulations

Design and integrate models

Matlab Simulink model integration

FMI 2.0/3.0 compliance

C, C++

Monitor and debug

Operate multiple table views and graphs
Inject faults to test the limits of your simulation
Start, pause and resume the runtime engine

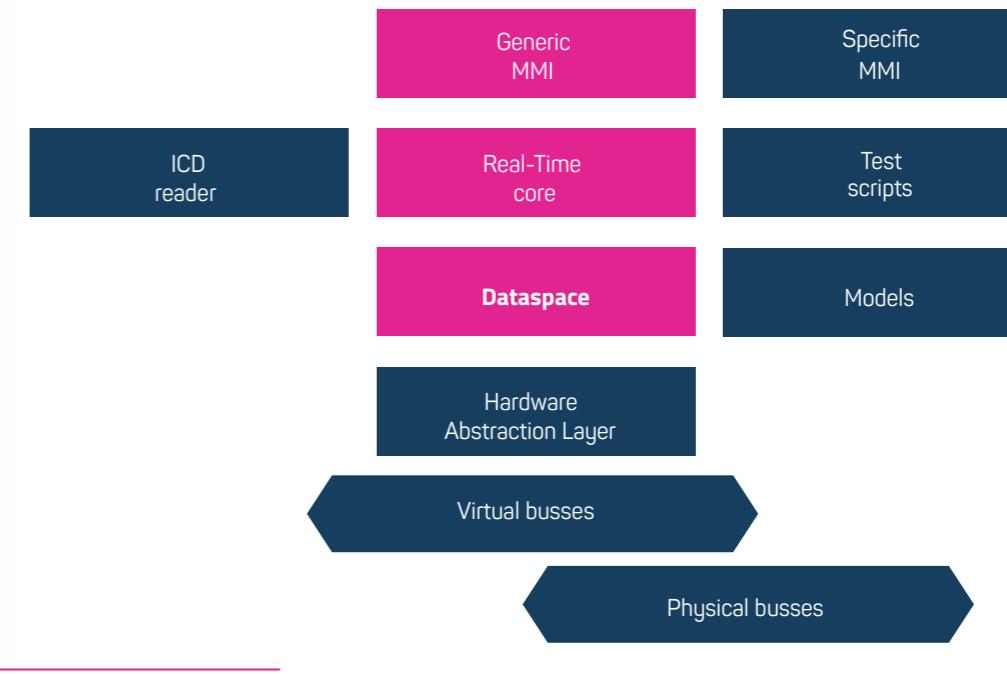

Script to automate

Embedded Test Framework
Open APIs (Python, C, C++, .NET, Java)
Get XML, HTML reports

Record and analyse

Real time recording capabilities
Analyse HDF5 records

Architecture Overview

An optimised and efficient core

Opening and modularity guaranteed by plugins

Advanced features

Design your own GUI with multiple types of widgets
Customize the internal scheduler to improve performance
Operate the simulated time feature :
- to reduce simulation duration
- to troubleshoot issues

HIL Capabilities

Wide range of instruments
Large library of signals, busses and protocols available (DIO, Analog, CAN, A429, AFDX, etc...)

U-TEST® CONSORTIUM

Source code shared within the community
Enrichment of the product by technical experts
Fully-autonomous implementation of test means
